

Fact Sheet:

# **The SAFE Port Act of 2006**

## **Committee on Homeland Security**

Subcommittee on Economic Security, Infrastructure Protection, and Cybersecurity  
Dan Lungren (R-CA), Subcommittee Chairman

U.S. House Homeland Security Subcommittee Chairman Dan Lungren (R-CA) and Rep. Jane Harman (D-CA) will introduce the Security and Accountability for Every (SAFE) Port Act. The SAFE Port Act is a comprehensive proposal that will take steps to: prevent threats from reaching the United States, track and protect containers en route, and harden security at U.S. ports.

### **I. Enhancing Security at U.S. Ports**

In the aftermath of 9/11, the United States must continue to increase domestic port security and harden our critical infrastructure defenses. Recognizing that we must be aggressive in protecting U.S. ports, the bill:

- Ensures 100 percent of containers are scanned for radiation by requiring the U.S. Department of Homeland Security (DHS) Secretary to complete a timeline for deployment of radiation portal monitors at remaining seaports and to establish standard operating procedures for examining containers;
- Provides risk-based funding through a dedicated Port Security Grant Program to harden U.S. ports against terrorist attacks and enhance capabilities to respond to attacks and resume operations;
- Requires DHS to conduct terrorist watch-list checks of all port employees with access to secure areas, and to report the number of watch-list matches, ports where employees work, and actions taken within 90 days of enactment;
- Requires the Secretary to establish joint operations centers at seaports to bring together federal, state, local, and private sector partners to coordinate security measures at the ports and unify response efforts;
- Requires the Secretary to develop protocols for resuming trade after a transportation security incident through planning, improved government and private sector coordination, and prioritization of vessels; and
- Ensures that employees operating radiation portal monitors are protected from any harmful effects of using radiation equipment.

### **II. Preventing Threats from Reaching the United States**

It is essential that our nation take a global approach to the way we thwart terrorist attacks and protect U.S. ports. Recognizing that we must be strategic in preventing threats from ever reaching the United States, the bill:

- Requires DHS to conduct robust security assessments for foreign ports interested in participating in the Container Security Initiative (CSI) program, an initiative designed to enable DHS to examine high-risk maritime cargo at foreign seaports;

- Strengthens the Customs-Trade Partnership Against Terrorism (C-TPAT) program, which creates partnerships between DHS and the private sector to establish transparency in the supply chain, enhance security measures, and encourage greater information sharing;
- Sets minimum standards for C-TPAT participation and divides program membership into tiered categories, based on the level of each country's security cooperation;
- Establishes a top tier for the most trusted private sector partners participating in the C-TPAT program, which will provide additional processing benefits in exchange for greater security cooperation; and
- Authorizes the Secretary of DHS to loan detection equipment and provide training to host nations to effectively examine containers bound for the United States.

### **III. Tracking and Protecting Containers En Route to the United States**

The ability to efficiently track potentially high-risk containers that are traveling to the United States is imperative to protecting American ports. In an effort to detect and protect containers en route to the United States, the bill:

- Improves the Automated Targeting System (ATS), which is designed to identify high risk containers before they reach American soil, by determining additional commercial data elements necessary for more robust targeting;
- Improves the International Trade Data System, which links all Federal commercial data to ensure more thorough security checks while providing the private sector with a single system to submit required information;
- Requires the Secretary to establish standards for securing containers within 180 days;
- Revives Operation Safe Commerce, which is designed to improve utilization of private sector initiatives, boosts research and development activities, and enhance coordination within DHS; and
- Directs the Department to conduct additional research and testing on technology integration, access control, and data sharing capabilities for port security.
